COMPREHENSIVE HEALTH CHECK — CONSULTATION SUMMARY

Patient: Ms Jane Smith	DOB: 15/03/1975	Age: 47
NHS: 9876543210	Tel: 07700 900123	Patient ID: 1000001

Address:	14 Oak Lane, Kensington London, W8 4PT	Consultation:	03 January 2022
Email:	janesmith1975@example.com	Report Date:	04 January 2022
Occupation:	Project Manager	Consultant:	Dr T. Patel
Height:	163 cm	Nurse:	K. Spencer
Weight:	62 kg	BP:	118/74 mmHg
		Pulse:	68 bpm, regular

Summary of Findings

Ms Jane Smith attended for her annual comprehensive health check on 03 January 2022. She is a non-smoker with no current medication. Family history notable for hypertension (maternal). BMI within healthy range at 23.3 kg/m².

Cardiovascular: Resting ECG normal sinus rhythm. BP well-controlled. Stress echo — no inducible ischaemia. Holter 24-hour — normal.

Haematology & Biochemistry: FBC, renal, liver, lipid profile, thyroid and HbA1c all normal. Vitamin D mildly low — supplementation recommended.

Imaging: MRI brain and spine — no significant findings. Mammography and breast ultrasound normal. Abdominal ultrasound normal.

Gastrointestinal: Colonoscopy and gastroscopy — no polyps; gastric mucosa intact.

Musculoskeletal: Right knee — mild patellofemoral syndrome, physiotherapy recommended.

Signed: Dr T. Patel Date: 04 January 2022

Sonic Healthcare UK — Interpretive Comment

Patient: Ms Jane Smith | Lab No: 22T220005 | Reported: 04/01/2022

Vitamin D mildly deficient (38 nmol/L; target >75 nmol/L). Supplementation with Vitamin D3 2000 IU daily recommended with repeat in 3 months. Omega-3 index below optimal range (4.8%; target >8%). Dietary review advised. ACTH mildly elevated — repeat fasting AM sample recommended. All other parameters within normal limits. Tumour markers not raised.

Authorised by: C. Roberts RCPATH Date: 04/01/2022

EPR Radiology — MRI Report

Examination: MRI Brain, Cervical, Thoracic & Lumbar Spine

Date: 04/01/2022

MRN: 100001001

Referrer: Dr T. Patel

BRAIN

No intracranial mass, haemorrhage, or infarct. Ventricles normal. No abnormal FLAIR/DWI signal.

CERVICAL SPINE

Mild C5/6 disc desiccation, no foraminal stenosis, no cord signal change.

THORACIC SPINE

Normal alignment and disc heights. Cord signal normal throughout.

LUMBAR SPINE

Mild L4/5 disc bulge, no canal compromise, no nerve root compression.

CONCLUSION

No significant intracranial or spinal pathology. Mild degenerative disc changes appropriate for age.

Central Consulting Ltd — Neurosurgical Opinion

30 Weymouth Street, London, W1G 7BP

Date: 17 January 2022

Re: Ms Jane Smith DOB: 15/03/1975 NHS: 9876543210

Dear Dr T. Patel,

Thank you for referring Ms Jane Smith, a 47-year-old project manager, for opinion regarding intermittent cervical radiculopathy and incidental MRI findings.

On examination, cervical spine ROM mildly reduced on right rotation. Neurological examination of upper and lower limbs normal. Reflexes symmetric.

MRI confirms mild C5/6 disc desiccation without foraminal stenosis or cord signal change — does not require surgical intervention.

Conservative management advised: postural advice, physiotherapy, NSAIDs as required. Return if symptoms progress.

Yours sincerely, Prof. A. Davies FRCS, Consultant Neurosurgeon

CCL — Neurosurgical Opinion (page 2 of 2)

Patient: Ms Jane Smith | MPI: L0000002

Examination Findings:

- Cervical rotation R: 60° (mildly reduced), L: 75° (normal)
- Upper limb power 5/5 bilaterally
- Sensation intact C5–T1 dermatomes
- Hoffman sign negative bilaterally
- Gait normal

Impression: Incidental C5/6 disc desiccation — no surgery warranted.

Plan: Physiotherapy (cervical stabilisation), NSAIDs PRN, follow-up if worsens.

Dictated: 17 January 2022 Signed: Prof. A. Davies FRCS

Re: Ms Jane Smith | DOB: 15/03/1975 | NHS: 9876543210

Dear Dr T. Patel,

Thank you for referring Ms Jane Smith, 47-year-old, right anterior knee pain 8 months. Regular recreational runner.

Examination: mild peripatellar tenderness, positive patellar grind, negative McMurray, negative drawers. Full ROM. No effusion.

X-ray: no joint space narrowing, mild patella alta (Insall-Salvati 1.28). No loose body.

Impression: Patellofemoral syndrome (chondromalacia grade I-II).

Plan: Physiotherapy (VMO strengthening, hip abductor programme, gait retraining), reduce running 50% × 8 weeks, NSAIDs PRN. Review 3 months.

Yours sincerely, Mr D. Harrison, Consultant Orthopaedic Surgeon

Orthopaedic Assessment — Right Knee (page 2 of 4)

Patient: Ms Jane Smith | DOB: 15/03/1975

Alignment: Normal tracking, mild lateral tilt

ROM: 0°–140° full

Effusion: None

JL tenderness: Absent

Patella grind: Positive

Anterior draw: Negative

McMurray: Negative

Lachman: Grade 0 — stable

Orthopaedic Assessment — Right Knee (page 3 of 4)

Patient: Ms Jane Smith | DOB: 15/03/1975

X-ray Report — Right Knee

Standing AP, lateral, skyline. Joint spaces preserved. Patella alta: Insall-Salvati ratio 1.28 (upper normal). No calcification. No loose body. Tibial spines intact.

Orthopaedic Assessment — Right Knee (page 4 of 4)

Patient: Ms Jane Smith | DOB: 15/03/1975

Physiotherapy Referral

Please assess and treat Ms Jane Smith, 47y, right patellofemoral syndrome. Programme: VMO activation, hip abductor strengthening, patellar taping, gait analysis. Review 8 weeks. Signed: Mr D. Harrison
